

Latin/English list of displayed animals of the regional fauna

Each year the Muséum d'histoire naturelle of the City of Geneva welcomes more than 200'000 visitors, many of whom are English speaking.

In order to make your visit even more enjoyable and interesting, we are introducing this Latin/ English list of the names of the nearly 1000 species of animals of the regional fauna. These can be seen in our displays and dioramas on the main floor.

This brochure will allow you to find out the English name, when available, of the species on display using the Latin name written in italics on the labels placed in front of each animal shown.

Most of the vertebrates of Switzerland, as well as many invertebrates, are presented in the display cases or in the dioramas on the regional fauna. Twenty-eight species of amphibians and reptiles, 88 species of mammals, 193 species of Swiss nesting birds as well as most of our migratory visitors are available for your discovery.

Should you encounter errors or irregularities on the English names being used, please do not hesitate to mention them to us by email at info.mhn@ville-ge.ch or at the Muséum's reception desk. Your suggestions or comments about this list or your visit to the Muséum are always welcome.
